Course: B.Tech   Type: Core

Course Name: Human Computer Interface

Year: 2024   Semester: ODD

Date:26-Sep-2024   Branch: CSE

## Create a Movie Ratings Webpage

Develop a simple, interactive webpage where users can rate various movies. The webpage should include a home page and a movies page. Users will have the option to rate movies using five different ratings: Bad, Average, Good, Excellent, and Outstanding. Upon selecting a rating, a confirmation message should be displayed below the movie title.

Requirements:

- Header (Navbar):
    - Include a logo on the left side.
    - Add navigation links: Home, Movies, Sign Up, aligned horizontally on the right side.
    - The navbar should have a background colour (e.g., dark blue) with white text. On mobile devices, the navigation links should stack vertically.
- Home Page:
    - Create a hero section with a large background colour or image.
    - Centre a headline (e.g., "Rate Your Favourite Movies!") and a call-to-action button (e.g., "Get Started").
- Movies Page:
    - Display a list of movies with their titles.
    - For each movie, provide five rating buttons: Bad, Average, Good, Excellent, Outstanding.
    - When a user clicks a rating button, display a message below the movie title indicating their selected rating.
- Footer:
    - The footer should have a dark background with white text.
    - Include contact information.
